For ocean-going vessels

Anything that manages to cope with harsh offshore conditions shows on land what they are capable of too. The HMF vibration damper is the successful further development of the MF. With high spring stiffness in vertical, lateral and horizontal movement and a load range from 1,000 to 3,000 kg, we recommend it for a multitude of mobile applications. And installation takes next-to-no-time.

Top performance even in extreme conditions:
- Sturdy: the design prevents twisting.
- Well-protected against environmental factors.
- Defies wind and weather with its special anti-corrosion coating (chromium-6 free).
- Load range from 1000 to 3,000 kg.
- Perfect for mobile applications due to non-release protection (up to 6 g).

Effective
Highly efficient
First choice

Examples of applications:
- Offshore
- Inland waterways transport
- Compressors
- Generators
- Pumps
- Industrial machinery
