The SM keeps vibrations at a distance – especially for sensitive devices and static and stationary machines. And even for marathon loads it has enough reserves to provide sensitive technology with reliable protection against shocks. It is highly elastic in both the radial and axial direction and therefore offers outstanding isolation in all directions.

No chance for shocks:
- Easy installation.
- Load range from 3 to 2,500 kg.
- Ideal shock isolator and for low interference frequencies.
- Its large spring range makes it the preferred vibration damper for sensitive measuring equipment and instruments.

Protects delicate technology:
- Measuring and testing equipment
- Cooling systems and air conditioning systems
- Compressors
- Balances
- Pumps
- Fans
- Electric motors
